

HOW To Pair your SOLAX Inverter with your Broadband Wifi

Instructions step by step to pair your Solax Inverter with your Wifi Router.

- Please Open your laptop.
- Search for Wifi
- Select an AP network started with AP_***** OR Wifi_*****
- Connect to this network (This is your Solax Inverter)
- Open your Browser (Chrome)
- Type in 5.8.8.8

Type Credentials

Username: **admin**

Password: **admin**

- Click on Wizard menu (second menu on the left)
- Click on Search AP or Refresh AP List (Whichever is available (This will be on the middle bottom of your screen).
- Select your Home Wifi Network (e.g: Vodafone abc124854)
- Enter your Local Home Wifi Network Password.
- Click next 4 times (don't change anything)

If you don't in right, you should have a white screen confirming, all good, wait 15 seconds then return to the main menu.

If you see this page, please wait 20seconds, return to main menu and confirm that your inverter got a local IP address like 192.168.1.122 or similar

If yes, from that point it will take 5-10 minutes for the inverter to populate your data to the Solax Portal.

You verified that the Pairing process was successful, please check your Solax Monitoring App in 10-15 minutes for updated data/
